Why am I applying?

I love the bright colors and use of Gotham on HyperScience.com. I just created a product that uses Gotham, and my portfolio's design system has lots of shapes, fun colors, and a geometric font.

Tools are near and dear to me, and I love Hyper Science's vision of changing tools to make a more simple future.

These two thoughts combine under a belief of mine that Product === Team. The opportunity to create tools with like-minded people is exciting!

Why would you hire me?

> *Expert level with JavaScript*

Once, after a technical interview, the interviewer said that my Javascript skills were "Godlike."

> *Passion for quality and attention to consistency. You write tests for your code.*

I have been working in the medical field for the last 3 years. With the abundance of regulation, I have acquired an affinity for Cypress, Jest, and Storybook to maintain technical consistency through system and integration tests while maintaining visual consistency with image and JSON snapshot testing

I could go on, but I'll save that for the first interview. I am looking forward to learning more about Hyper Science

In the meantime find out more about me at joshuawootonn.com
